Using LibreOffice on macOS

Some keystrokes and menu items are different on macOS from those used in Windows and Linux. The table below gives some common substitutions for the instructions in this document. For a detailed list, see the application Help.

<table>
<thead>
<tr>
<th>Windows or Linux</th>
<th>macOS equivalent</th>
<th>Effect</th>
</tr>

Documentation for LibreOffice is available at https://documentation.libreoffice.org/en/
Introduction

This chapter covers the basics of working with text in Writer. It assumes that you are familiar with the use of a mouse and keyboard and that you have read about Writer's menus and toolbars and other topics covered in Chapter 1, Introducing Writer.

We recommend that you also display formatting aids, such as end-of-paragraph marks, tabs, breaks, and other items in Tools > Options > LibreOffice Writer > Formatting Aids. You can hide or display these markers by going to View > Formatting Marks. See Chapter 20, Setting up Writer, for more information.

When you have read this chapter, you should know how to:

- Select, cut, copy, paste, and move text.
- Find and replace text.
- Insert special characters.
- Check spelling and grammar, use the thesaurus, and choose hyphenation options.
- Use the AutoCorrect, Word Completion, AutoText, and case-changing features.

See also Chapter 3, Working with Text: Advanced, and Chapter 4, Formatting Text.

Selecting text

Selecting text in Writer is similar to selecting text in other applications. You can swipe the mouse cursor over text or use multiple clicks to select a word (double-click), sentence (triple-click), or paragraph (quadruple-click).

You can also click in the text, press F8 to enter Extending selection mode, and then use the arrow keys on your keyboard to select a contiguous block of text. Press F8 again after you have finished selecting the block of text.

In addition, you can select non-contiguous items and vertical blocks of text.

One way to change the selection mode is to use the icon on the Status bar (see Figure 1). When you right-click the icon, a context menu displays the available options: Standard selection, Extending selection (F8), Adding selection (Shift+F8), and Block selection (Ctrl+Shift+F8). Left-clicking cycles through these selections.

Selecting items that are not contiguous

To select non-contiguous items (as shown in Figure 2) using the mouse in Standard selection mode:

1) Select the first piece of text.
2) Hold down the Ctrl key and use the mouse to select the next piece of text.
3) Repeat as often as needed.
To select non-contiguous items using the keyboard in *Adding selection* mode:

1) Select the first piece of text. (For more information about keyboard selection of text, see the topic “Navigating and Selecting with the Keyboard” in the LibreOffice Help (F1).)

2) Press *Shift+F8* to enable *Adding selection* mode.

3) Use the arrow keys to move to the start of the next piece of text to be selected. Hold down the *Shift* key and select the next piece of text.

4) Repeat as often as required.

Now you can work with the selected text. After finishing your work with the selected text, press *Esc* to exit *Adding selection* mode.

---

**Figure 2**: Selecting non-consecutive pieces of text

---

**Selecting a vertical block of text**

You can select a block text that spans through multiple rows using Writer’s *Block selection* mode. To change to Block selection mode, use *Edit > Selection Mode > Block Area*, or press *Ctrl+F8*, or click the Selection icon in the status bar and select *Block selection* in the list. Now you can highlight the selection, using mouse or keyboard, as shown in Figure 3.

---

**Figure 3**: Selecting a block of text
Cutting, copying, and pasting text

Cutting and copying text in Writer is similar to cutting and copying text in other applications. You can copy or move text within a document, or between documents, by dragging or by using menu selections, icons, or keyboard shortcuts. You can also copy text from other sources such as Web pages and paste it into a Writer document.

- To move (drag and drop) selected text using the mouse, drag it to the new location and release it; the cursor changes shape while dragging.
- To copy selected text, hold down the Ctrl key while dragging. The text retains the formatting it had before dragging.
- To move (cut and paste) selected text, use Ctrl+X to cut the text, insert the cursor at the paste-in point and use Ctrl+V to paste. Alternatively, use the Copy/Paste buttons on the Standard toolbar.

When you paste text, the result depends on the source of the text and how you paste it. If you click the Paste button, then the pasted text keeps its original formatting (such as bold or italics). Text pasted from websites and other sources may be placed automatically into frames or tables as part of the format when you paste. If you do not like the results, click the Undo button or press Ctrl+Z.

To make the pasted text inherit the paragraph style at the insertion point:

- Choose Edit > Paste Special, or
- Click the arrow on the combination Paste button, or
- Double-click the Paste button without releasing the left mouse button, or
- Press Ctrl+Shift+V

Then select Unformatted text in the resulting menu.

You can also press Ctrl+Alt+Shift+V, which pastes unformatted text directly.

The range of choices on the Paste Special menu varies depending on the origin and formatting of the text (or other object) to be pasted. See Figure 4 for an example with text on the clipboard.

Finding and replacing text

Writer has two ways to find text within a document: the Find toolbar for fast searching and the Find and Replace dialog. In the dialog, you can:

- Find and replace words and phrases.
- Use wildcards and regular expressions to fine-tune a search (see Chapter 3).
- Find and replace specific attributes or formatting (see Chapter 3).
- Find and replace paragraph styles (see Chapter 3).
Using the Find toolbar

By default, the Find toolbar is shown docked at the bottom of the LibreOffice window (just above the Status Bar) in Figure 5, but you can float it or dock it in another location. For more information on floating and docking toolbars, see Chapter 1, Introducing Writer. If the Find toolbar is not visible, you can display it by choosing View > Toolbars > Find on the Menu bar or by pressing Ctrl+F.

![Docked position of Find toolbar](image)

Figure 5: Docked position of Find toolbar

To use the Find toolbar, click in the text input box and type your search text, then press Enter to find the next occurrence of that term from the current cursor position. Click the Find Next or Find Previous buttons as needed.

Click the Find All button to select all instances of the search term within the document. Select Match Case to find only the instances that exactly match the use of upper and lower case letters in the search term. Click the icon next to Match Case to open the Find and Replace dialog.

To close the Find toolbar, click the X button on the left, or press Esc on the keyboard when the text cursor is in the search box.

Using the Find and Replace dialog

To display the Find and Replace dialog (Figure 6), use any of the following methods:

- Use the keyboard shortcut Ctrl+H.
- Choose Edit > Find and Replace on the Menu bar.
- Click the Find and Replace button on the Find toolbar.

![Expanded Find & Replace dialog](image)

Figure 6: Expanded Find & Replace dialog
When the dialog is open, click **Other options** to expand it.

To use the Find and Replace dialog:

1) Type the text you want to find in the **Find** box.
2) To replace the text with different text, type the new text in the **Replace** box.
3) You can select various options, such as matching the case or matching whole words only.

   The other options include searching only in selected text, searching from the current cursor position backwards toward the beginning of the document, searching for similar words, searching in comments, and using regular expressions (wildcards). The use of other options is described in Chapter 3, Working with Text: Advanced.

   Additional options are shown when CTL or Asian languages have been selected in **Tools > Options > Language Settings > Languages**.

4) When you have set up the search, click **Find Next**. As the document view moves to each found instance, you can replace the text by clicking **Replace** or skip that instance by clicking **Find Next** again.

   **Tip**
   
   If you click **Find All**, Writer selects all instances of the search text in the document. Similarly, if you click **Replace All**, Writer replaces all matches, without stopping for you to accept each instance.

   **Caution**
   
   Use **Replace All** with caution; otherwise, you may end up with mistakes that you won't be able to undo later if you save and close the file. (Ctrl+Z works only before the file is saved.) A mistake with **Replace All** might require a manual, word-by-word, search to fix.

**Inserting special characters**

A special character is one not found on a basic English keyboard. For example, © ¾ æ ç Ł Ń ô ø ŋ c are all special characters.

To insert one or more special characters, place the cursor in the position where you want the characters to appear. Then do one of the following:

- Click the **Special Character** icon on the Standard toolbar to open a list of favorite and recently used characters and click on one to insert it (Figure 7). You can also open the Special Characters dialog (Figure 8) by clicking the **More Characters** button in this list.

**Figure 7: Insert Special Characters in the standard toolbar**
• Click Insert > Special Character to open the Special Characters dialog (Figure 8). Double-click the characters (from any font or mixture of fonts) you wish to insert, in order; they appear in the document as you select them. The selected characters are also added to the Recent Characters list on the lower left of the dialog.

Figure 8: The Special Characters dialog

**Tips**

To view details of a character, single-click it; details are shown on the right, along with its numerical code.

To insert a character and leave the dialog open, double-click the character. To insert a character and close the dialog, click it and then click the Insert button.

Different fonts include different special characters. If you do not find a particular special character you want, try changing the Font selection.

**Inserting non-breaking spaces, hyphens, and more**

You can insert a variety of formatting marks while typing or later. Most of these marks can be inserted using a keyboard shortcut; all are available in Insert > Formatting Mark on the Menu bar (Figure 9).

**Non-breaking space**

To prevent two words from being separated at the end of a line, press Ctrl+Shift when you type the space between the two words.

**Non-breaking hyphen**

You can use a non-breaking hyphen (also called a hard hyphen) in cases where you do not want the hyphen to appear at the end of a line, for example in the following text “123-4567”. To insert a non-breaking hyphen, press Shift+Ctrl+hyphen.
Soft Hyphen
Soft hyphens (also called custom, discretionary, or optional hyphens) specify where words should be divided at the end of a line. If the word does not occur at the end of a line, the hyphen does not appear. To insert a soft hyphen, press Ctrl+hyphen.

Narrow No-break Space
If you want a non-breaking space that is not as wide as a normal space, press Alt+Shift while you type the space.

When complex text layout (CTL) is enabled, these additional formatting marks are active:

No-width Optional Break
Use Ctrl+/ to insert an invisible space in a word that will cause a line break if it is the last character in the line. Available when complex text layout (CTL) is enabled.

Word Joiner
Inserts an invisible space in a word that will keep the word together at the end of a line. In earlier versions of Writer, this mark was called No-width no break.

Left-to-right Mark
Inserts an invisible mark that affects the text direction of any text following the mark.

Right-to-Left Mark
Inserts an invisible mark that affects the text direction of any text following the mark.

Inserting en and em dashes
To enter en and em dashes as you type, you can use the Replace dashes option on the Options tab under Tools > AutoCorrect > AutoCorrect Options. This option replaces one or two hyphens, under certain conditions, with the corresponding dash.

– An en-dash is a dash the width of the letter “n” in the font you are using.
— An em-dash is a dash the width of the letter “m” in the font you are using.

In Table 1, the A and B represent text consisting of letters A to Z or digits 0 to 9.
Table 1: Inserting dashes

<table>
<thead>
<tr>
<th>Text that you type</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>A - B (A, space, hyphen, space, B)</td>
<td>A – B (A, space, en dash, space, B)</td>
</tr>
<tr>
<td>A -- B (A, space, hyphen, space, B)</td>
<td>A – B (A, space, en dash, space, B)</td>
</tr>
<tr>
<td>A-–B (A, hyphen, hyphen, B)</td>
<td>A—B (A, em dash, B)</td>
</tr>
<tr>
<td>1--2 (number, hyphen, hyphen, number)</td>
<td>1–2 (number, en dash, number)</td>
</tr>
<tr>
<td>A-B (A, hyphen, B)</td>
<td>A-B (unchanged)</td>
</tr>
<tr>
<td>A -B (A, space, hyphen, B)</td>
<td>A -B (unchanged)</td>
</tr>
<tr>
<td>A --B (A, space, hyphen, hyphen, B)</td>
<td>A –B (A, space, en dash, B)</td>
</tr>
</tbody>
</table>

Another means of inserting en and em dashes is through the **Insert > Special Characters** menu. Select the U+2013 or U+2014 character (found in the General punctuation subset), respectively. A third method uses keyboard shortcuts. These shortcuts vary depending on your operating system, as described below.

**Tip**

You can also record macros to insert en and em dashes and assign those macros to unused key combinations, for example Ctrl+Shift+N and Ctrl+Shift+M. For more information about key combinations, see Chapter 20, Customizing Writer.

**macOS**

For an en dash, hold down the Option (Alt) key and type a hyphen. For an em dash, the combination is Shift+Option+Hyphen.

**Windows**

On most non-Asian installations of Windows, hold down the left Alt key and type on the numeric keypad: 0150 for an en dash or 0151 for an em dash. The dash appears when you release the Alt key.

**Tip**

On a keyboard with no numeric keypad, use a Fn (Function) key combination to type the numbers. (The Fn key is usually next to the right of the left-hand Ctrl key on the keyboard.) For example, on a US keyboard layout, the combination for an en dash should be Alt+Fnmjim and for an em dash it should be Alt+Fnmjij.

**Linux**

Hold down the Compose key and type two hyphens and a period for an en dash, or three hyphens for an em dash. The dash appears when you release the Compose key.

**Tip**

The key that operates as a Compose key varies with the Linux distribution. It is usually one of the Alt or Win keys, but may be another key, and should be user-selectable.
Checking spelling and grammar

Writer provides a spelling checker, which checks to see if each word in the document is in the installed dictionary. Also provided is a grammar checker within the Spelling dialog, which can be enabled or disabled in the Spelling dialog.

Writer can check spelling and grammar as you type, depending on settings you choose. You can also choose to check them at any time, Spelling

To enable automatic checking of spelling, go to Tools on the Menu bar and select Automatic Spell Checking, or click the Automatic Spell Checking icon (which may not be displayed by default) on the Standard Toolbar, or go to Tools > Options > Language Settings > Writing Aids and select Check spelling as you type in the Options list.

Automatic Spell Checking checks each word as it is typed and displays a wavy red line under any unrecognized words. Right-click an unrecognized word to open a context menu (Figure 10). You can click one of the suggested words to replace the underlined word with the one selected. If the list does not contain the word you want, click Spelling to open a dialog. When the word is corrected, the line disappears. If the word is correct but not in the dictionary, you can chose Add to dictionary to add it.

![Spelling context menu](image)

Figure 10: Spelling context menu

If the document has change tracking enabled, then the context menu contains extra options relating to changes in the text.

The choices in the second and third sections of the menu are:

**Ignore**
This one instance of the underlined word will be ignored while the document is open. Other instances, if they exist, will still be underlined. This setting is not stored with the document.

**Ignore All**
All instances of the word in the document will be ignored, and the word will be added to the ignoreAllList user-defined dictionary.

**Add to Dictionary**
The word is added by default to the Standard dictionary.

**Spelling**
This choice opens the Spelling dialog, which is explained in the next section.
Always correct to
Selecting this opens the submenu, which repeats the suggestions for the word from the top section listing. Selecting a replacement word here stores the word pair in the replacement table under Tools > AutoCorrect > AutoCorrect Options > Replace. The underlined word is replaced with the selected word.

AutoCorrect Options
Opens the AutoCorrect Options dialog (see page 19), where you can add your own corrections or change those supplied with LibreOffice.

In the fourth section of the context menu, you can set language settings for the text. These settings can be applied to the selection or to the paragraph containing the selection.

Spelling and grammar
To perform a combined spelling and grammar check on the document (or a text selection), select Tools > Spelling or click the Spelling button on the Standard toolbar, or press F7. In order to use this feature, the appropriate dictionaries must be installed.

The Spelling tool checks either the document from the cursor point onwards, or the text selection. It opens the Spelling dialog (Figure 11) if any unrecognized words are found or if any of the built-in grammar rules are broken. You can choose to restart from the beginning of the document when the check reaches the end of the document.

If you have selected the Check grammar option in the lower left of the dialog, any grammar errors detected will also be shown. See Figure 13 for an example.

![Spelling alert using the Spelling dialog](image1)

Figure 11: Spelling alert using the Spelling dialog

Text language
The language to be used for checking spelling can be selected from this drop-down list.

Not in dictionary
The sentence containing the error is displayed in the pane. If an unrecognized word is found, it is highlighted. If the error is grammatical, it is indicated in a pale colored bar below the Text language setting (Figure 13). The sentence or the word can be edited in the pane.
Suggestions
The box contains suggested replacements for the highlighted word. Select a word and then select Correct or Correct All to replace it.

For grammatical errors there is a single choice. Select Change to accept the suggestion.

Ignore Once, Ignore All, and Add to Dictionary
Clicking one of these buttons has the same effect as the item in the context menu described above.

Ignore Rule
When checking grammar, you can choose to ignore the suggested change.

Correct
Replaces the unknown word with the suggested word. If the sentence was edited, the whole sentence is changed.

For grammar, the suggested replacement is used to correct the text.

Correct All
This replaces all instances of the word with the selected replacement word. Not available for grammar checking.

Always Correct
This behaves in a similar fashion to AutoCorrect.

Undo
This button is enabled when a change has been made to the sentence, so you can reverse the change. The button is not available if you use a Correct button to replace a word.

Options
Click this button to open the Options dialog where you can select user-defined dictionaries and set the spell checking rules.

Grammar
By default, Check grammar as you type is enabled in Tools > Options > Language Settings > Writing Aids > Options. Automatic Spell Checking must be enabled for this to work. You can also check grammar at any time using the Spelling tool, and you can disable grammar checking as you type.

When grammar checking as you type is enabled, any errors detected are shown underlined by a wavy blue line. Right-clicking on this line opens a context menu (Figure 12).

- The first entry in the menu describes the suspected broken grammatical rule.
- The second menu item in the left example is Explanations, which opens your browser to a web page offering more information about the error. This entry is not always present in the context menu, as seen in the second example in Figure 12.

![Figure 12: Context menu for grammar errors](image)
• In the second section of the menu is the suggested correction. Clicking this changes the text to the suggestion. The example to the right appears blank, but clicking here removes the extra space causing the error.

• In the third section of the menu you can choose to ignore the indicated error, or to open the Spelling dialog, shown in Figure 13. The example displays the URL that will take you to more information on the error indicated.

• In the final section of the menu, you can set the language for the selection or the paragraph.

![Spelling dialog showing the URL for expanded explanation](Figure 13)

**English sentence checking**

Additional grammar checking rules can be selected through **Tools > Options > Language Settings > English sentence checking**, or through **Tools > Extension Manager > English spelling dictionaries > Options**.

![Additional grammar checking options](Figure 14)
On the **English Sentence Checking** page (Figure 14), choose which items are checked for, reported to you, or converted automatically. After selecting the additional grammar checks, you must restart LibreOffice, or reload the document, for them to take effect.

**Grammar checking**

**Possible mistakes**
- Checks for errors such as *with it’s, he don’t, this things* and so on.

**Capitalization**
- Checks for the capitalization of sentences.

**Word duplication**
- Checks for all word duplication, rather than just the default words ‘and’, ‘or’, ‘for’ and ‘the’.

**Parentheses**
- Checks for correct pairing of parentheses and quotation marks.

**Punctuation**

**Word spacing**
- This option is selected by default. It checks for single spaces between words, indicating instances of double or triple spaces. To find and correct longer groups of spaces, you need to run the checker more than once.

**Quotation marks**
- This checks that double quotation marks are typographically correct, that is, beginning [*] and ending [*] quotation marks curve in the correct directions.

**Sentence spacing**
- Checks for a single space between sentences, indicating when one or two extra spaces are found.

**Apostrophe**
- Replaces an apostrophe with the correct (curved) typographical character.

**More spaces**
- Checks word and sentence spacing for more than two extra spaces.

**Em dash; En dash**
- These options force a non-spaced *em* dash to replace a spaced *en* dash, or force a spaced *en* dash to replace a non-spaced *em* dash, respectively. This feature provides for different punctuation conventions.

**Multiplication sign**
- This option is selected by default. It replaces an ‘x’ used as a multiplication symbol with the correct typographical symbol.

**Ellipsis**
- Replaces three consecutive periods (full stops) with the correct typographical symbol.

**Minus sign**
- Replaces a hyphen with the correct minus typographical character.

**Others**

**Convert to metric; Convert to non-metric**
- Converts quantities in a given type of unit to quantities in the other type of unit.

**Thousands separation of large numbers**
- Depending on the locale setting for the document, converts a number with five or more significant digits to either use a comma as a thousands separator or the ISO format, which uses a narrow space as a separator.
Using synonyms and the thesaurus

You can access a short list of synonyms from a context menu (Figure 15).

1) Right-click a word and point to Synonyms on the context menu. A submenu of alternative words and phrases is displayed.
2) Click a word or phrase in the submenu to have it replace the highlighted word or phrase in the document.

![Figure 15: Synonyms on the context menu](image_url)

The thesaurus gives a more extensive list of alternative words and phrases. To use the thesaurus:

1) Right-click on a word, point to Synonyms in the context menu, then click Thesaurus in the Synonyms submenu. See Figure 15.
2) In the Thesaurus dialog (shown in Figure 16), click a word or phrase in the list of meanings to select it.
3) Click Replace to make the substitution.

For example, when given the word house, the thesaurus offers several meanings, including dwelling, legislature, sign of the zodiac, and others. Select a replacement word from the list under the relevant meaning, so for dwelling, you will see dwelling, home, domicile, abode, and other alternatives.

Note

If the current language does not have a thesaurus installed, this feature is disabled.
Figure 16: The thesaurus offers alternatives to words

Hyphenating words

You can hyphenate words at the end of a line in two ways: let Writer do it automatically (using styles and its hyphenation dictionaries), or insert conditional (soft) hyphens manually where needed. Or, you can choose to not hyphenate at all. Each choice has its pros and cons.

Automatic hyphenation

This option uses styles and over-rides the **Tools > Options** choices described on the next page.

To turn automatic hyphenation of words on or off:

1) Click the **Styles** tab on the Sidebar to open the Styles deck. On the **Paragraph Styles** list, right-click **Default Paragraph Style** and select **Modify**.
2) On the Paragraph Style dialog (Figure 17), go to the **Text Flow** tab.
3) Under **Hyphenation**, select or deselect **Automatically**. When automatic hyphenation is on, you can also set the criteria for when it should occur.
4) Click **OK** to save.

**Note**

Turning on hyphenation for the **Default Style** paragraph style affects all other paragraph styles that are based on **Default Style**. You can individually change other styles so that hyphenation is not active; for example, you might not want headings to be hyphenated. Any styles that are not based on **Default Style** are not affected. For more on paragraph styles, see Chapters 8 and 9 in this book.
Figure 17: Turning on automatic hyphenation

You can set hyphenation settings in Tools > Options > Language Settings > Writing Aids. These choices apply when there is no specific setting in a paragraph style. Hyphenation options set in Writing Aids are effective only if hyphenation is turned on through paragraph styles.

In Options, near the bottom of the dialog, scroll down to find the hyphenation settings.

Figure 18: Setting hyphenation options

To change the minimum number of characters for hyphenation, or the minimum number of characters before or after a line break, select the item, and then click the Edit button in the Options section.

**Hyphenate without inquiry**

Specifies that you will never be asked to manually hyphenate words that the hyphenation dictionary does not recognize. If this box is not selected, when a word is not recognized, a dialog will open where you can manually enter hyphens.

**Hyphenate special regions**

Specifies that hyphenation will also be carried out in footnotes, headers, and footers.

**Manual hyphenation**

To manually hyphenate words, do not use a normal hyphen, which will remain visible even if the word is no longer at the end of a line when you add or delete text or change margins or font size. Instead, use a soft hyphen, which is visible only when required.

To insert a soft hyphen inside a word, click where you want the hyphen to appear and press Ctrl+hyphen (minus sign) or use Insert > Formatting Mark > Insert soft Hyphen. The word will be hyphenated at this position when it is at the end of the line, even if automatic hyphenation for this paragraph is switched off.

**Using AutoCorrect**

Writer’s AutoCorrect function includes a long list of common misspellings and typing errors, which it corrects automatically. It also includes codes for inserting special characters, emojis, and other symbols. You can add your own special characters.
AutoCorrect is turned on by default when Writer is installed. You may wish to disable some of its features, modify others, or turn it off completely. To turn AutoCorrect off, uncheck **Tools > AutoCorrect > While Typing**.

You can add your own corrections or special characters or change those supplied with LibreOffice. Select **Tools > AutoCorrect > AutoCorrect Options** to open the AutoCorrect dialog. On the **Replace** tab, you can define what strings of text are corrected and how.

To stop Writer replacing a specific spelling, go to the **Replace** tab, highlight the word pair, and click **Delete**. To add a new spelling to the list, type it into the **Replace** and **With** boxes on the **Replace** tab, and click **New**.

![Figure 19: Replace tab of AutoCorrect dialog](image)

**Tip**

LibreOffice has an extensive list of special characters accessible with AutoCorrect. For example, type :smiling: and AutoCorrect will replace it with ☺. Or, (c) will be changed to ©. You also can add your own special characters.

See “AutoFormatting” in Chapter 4, Formatting Text, for discussion of the Options and Localized Options tabs of the dialog.
Using Word Completion

If Word Completion is enabled, Writer tries to guess which word you are typing and offers to complete the word for you. To accept the suggestion, press Enter. Otherwise, continue typing.

To turn off Word Completion, select Tools > AutoCorrect > AutoCorrect Options > Word Completion and deselect Enable word completion.

You can customize word completion on the Word Completion page of the AutoCorrect dialog (Figure 20):

- Add (append) a space automatically after an accepted word.
- Show the suggested word as a tip (hovering over the word) rather than completing the text as you type.
- Collect words when working on a document, and then either save them for later use in other documents or select the option to remove them from the list when closing the document.
- Change the key that accepts a suggested entry; the options are right arrow, End key, Enter (Return), Space bar, and Tab.
- Change the maximum number of words remembered for word completion and the length of the smallest words to be remembered.
- Delete specific entries from the word completion list.
Using AutoText

Use AutoText to store text, tables, fields, graphics, and other items for reuse and assign them to a key combination for easy retrieval. For example, rather than typing “Senior Management” every time you use that phrase, you can set up an AutoText entry to insert those words when you type “sm” and press F3.

AutoText is especially powerful when assigned to fields. See Chapter 17, Fields.

Creating AutoText

To store some text as AutoText:

1) Type the text into your document.
2) Select the text.
3) Go to Tools > AutoText (or press Ctrl+F3).
4) In the AutoText dialog (Figure 21), type a name for the AutoText in the Name box. Writer will suggest a one-letter shortcut, which you can change.

Figure 21: Defining a new AutoText entry

5) Choose the category for the AutoText entry, for example My AutoText.
6) Click the AutoText button at the bottom of the dialog and select from the menu either New (to have the AutoText retain specific formatting, no matter where it is inserted) or New (text only) (to have the AutoText take on the formatting around the insertion point).
7) Click Close to return to your document.
Tip

If the only option under the AutoText button is Import, either you have not entered a name for your AutoText or there is no text selected in the document.

To save a table as AutoText:

1) Create a table and format it the way you want.
2) Select the table.
3) Go to Tools > AutoText (or press Ctrl+F3).
4) Type a name for the AutoText (or amend the suggested shortcut and choose the category for the AutoText entry).
5) Click the AutoText button and select New (because you want the formatting of the table preserved).
6) Click Close to return to your document.

Inserting AutoText

To insert AutoText, type the shortcut and press F3.

Printing a list of AutoText entries

To print a list of AutoText entries:

1) Choose Tools > Macros > Organize Macros > Basic.
2) In the Macro From list, find and expand Gimmicks.
3) Select AutoText and then click Run. A list of the current AutoText entries is generated in a separate text document. You can then print this document.

Changing the case of selected text

To quickly change the case of text, select it, choose Format > Text on the Menu bar, and then choose one of the following:

- **UPPERCASE**, where all letters are capitalized.
- **lowercase**, where no words (except proper nouns) are capitalized.
- **Cycle Case**, which cycles the selected words through uppercase, lowercase, and capitalize every word.
- **Sentence case**, where only the first word is capitalized (together with any proper nouns).
- **Capitalize Every Word**, where every word is capitalized.
- **tOGGLE cASE**, which changes every letter to the opposite case.
- **Small capitals**, which capitalizes all letters in a reduced font size.

Writer does not have an automated way to do Title Case, where all words are capitalized except for certain subsets defined by rules that are not universally standardized. However, you can use **Capitalize Every Word** and then restore those words that you do not want capitalized.

The Format > Text menu also includes several manual formatting options, including bold, italic, and superscript. If Asian language support has been enabled, there are also several options that are used with Asian text: half-width, full-width, Hiragana, and Katakana.

You can also change the case of text using the Character dialog or a character style. Choose Format > Character, click the Font Effects tab (Figure 23), then select the type of capitalization in the Effects – Case: box.
