Acknowledgments

This chapter is based on Chapter 10 of Getting Started with LibreOffice 4.0. The contributors to that chapter are:

John A Smith  Jean Hollis Weber  Hazel Russman

Ron Faile Jr.

Publication date and software version

Published 20 November 2013. Based on LibreOffice 4.1.

Note for Mac users

Some keystrokes and menu items are different on a Mac from those used in Windows and Linux. The table below gives some common substitutions for the instructions in this chapter. For a more detailed list, see the application Help.

Quick printing

To quickly print a document or drawing, click on the **Print File Directly** icon on the Standard toolbar to send the entire document to the default printer that is defined for your computer.

| Note | You can change the action of the **Print File Directly** icon by sending a document to the printer defined for the document instead of the default printer for the computer. Go to **Tools > Options > Load/Save > General** and select the **Load printer settings with the document** option. |

Controlling printing

For more control over printing, use the Print dialog by going to **File > Print** on the main menu bar, or the keyboard shortcut **Ctrl+P**. The Print dialog (Figure 1) has four tabs where you can choose a range of options and these are described in the following sections.

| Note | The options selected on the Print dialog only apply to the printing of the current document that is open in Draw. To specify default print settings for LibreOffice, go to **Tools > Options > LibreOffice > Print**. |

| Note | If you have the option **Use LibreOffice dialogs** selected in **Tools > Options > General > Print** dialogs then the Print dialogs will be similar to the one shown in Figure 1 thru . If **Use LibreOffice dialogs** is not selected, the Print dialog displayed will depend on your computer setup. |

*Figure 1. Print dialog – General page*
**General page**

On the **General** page of the Print dialog (Figure 1), you can select:

- Which printer to use from the printers available in the **Printer** section.
- Which pages to print, number of copies to print, whether to collate multiple copies, and page order for printing in the **Range and copies** section.

**LibreOffice Draw page**

On the **LibreOffice Draw** page of the Print dialog (Figure 2), you can define settings that are specific to the current document type:

- In the **Contents** section, print the page name and/or the date and time on the drawing.
- In the **Colors** section, print the drawing in original colors, as a grayscale, or in black and white.
- In the **Size** section, print the drawing in its original size, fit the drawing to the printable area of the page, print the drawing on multiple sheets of paper if the drawing is too large for the paper size being used, or print the drawing as multiple tiles on a sheet of paper.

![Figure 2. Print dialog – LibreOffice Draw page](image)

**Page Layout page**

On the **Page Layout** page of the Print dialog (Figure 3), you can define the page layout when your drawing is printed.

- In the **Layout** section, select how many pages per sheet of paper are printed, the order in which the pages are printed on a sheet, whether a border is drawn around each page, or the drawing is printed as a brochure.
- In the **Page sides** section, select whether to print all the pages, the back sides/left pages only, or the front sides/right pages only. This option is useful when you want to print double-sided when your printer does not support duplex printing.
Options page

On the Options page (Figure 4) you can select whether to print to file, create single print jobs when you want to use collated output, use only the printer tray specified in the printer preferences, or use the paper size specified in the printer preferences.
Printing multiple pages on a single sheet
To print multiple pages of a document on one sheet of paper:

1) Go to File > Print on the menu bar or use the keyboard shortcut Ctrl+P to open the Print dialog and then select the Page Layout page (Figure 3).

2) In the Layout section, select from the Pages per sheet drop-down list the number of pages to print per sheet. The preview panel on the right shows how the pages will look in the printed document.

3) When printing more than two pages per sheet, select the order in which the pages are printed on a sheet from the Order drop down list.

4) To distinguish each page on a sheet, select the Draw a border around each page option.

5) Click Print.

Selecting pages to print
In addition to printing a full document, you can choose whether to print individual pages, a range of pages, or a highlighted selection within a document.

**Individual page**

1) Go to File > Print on the menu bar or use the keyboard shortcut Ctrl+P to open the Print dialog and then select the General page (Figure 1).

2) In the Ranges and copies section, select the Pages option.

3) Enter the number of the page to print.

4) Click the Print button.

**Range of pages**

1) Go to File > Print on the menu bar or use the keyboard shortcut Ctrl+P to open the Print dialog and then select the General page (Figure 1).

2) In the Ranges and copies section, select the Pages option.

3) Enter the number of the pages to print (for example 1-4 or 1,3,7,11), or any combination of the two (for example: 1-4,5-9,10).

4) Click Print.

**Selection printing**
To print a selection from a page or multiple pages:

1) In the document, highlight the section of the page or pages to print.

2) Go to File > Print on the menu bar or use the keyboard shortcut Ctrl+P to open the Print dialog and then select the General page (Figure 1).

3) In the Ranges and copies section, select the Selection option.

4) Click Print.

**Brochure or booklet printing**
In Writer, Impress, and Draw, you can print a document with two pages on each side of a sheet of paper, arranged so that when the printed pages are folded in half, the pages are in the correct order to form a booklet or brochure.
Tip
Plan your document so it will look good when printed half size; choose appropriate margins, font sizes, and so on. You may need to experiment.

**Single sided printer**

To print a brochure or booklet on a printer only capable of single sided printing:

1) Go to **File > Print** on the menu bar or use the keyboard shortcut Ctrl+P to open the Print dialog and then select the **General** page (Figure 1).

2) Select the printer you want to use if more than one printer is connected to your computer.

3) Click **Properties** to open the properties dialog for the selected printer (Figure 5).

4) Check the printer is set to the same orientation (portrait or landscape) as specified in the page setup for your document. Usually the orientation does not matter, but it does for brochures and booklets.

5) Click **OK** to return to the Print dialog.

6) Select the **Page layout** tab in the Print dialog (Figure 3).

7) Select the **Brochure** option (Figure 6).

8) In the **Page sides** section, select **Back sides/left pages** option from the drop-down list.

9) Click **Print**.

10) Take the printed pages out of the printer, turn the pages over, and put them back into the printer in the correct orientation to print on the blank side. You may need to experiment a bit to find out what the correct arrangement is for your printer.

11) In the **Page sides** section, select **Front sides/right pages** option from the drop down list.

12) Click **Print**.

**Double sided or duplex printer**

To print a brochure or booklet on a printer that is capable of double-sided or duplex printing:

1) Go to **File > Print** on the menu bar or use the keyboard shortcut Ctrl+P to open the Print dialog and then select the **General** page (Figure 1).
2) Select the printer you want to use if more than one printer is connected to your computer.
3) Click Properties to open the properties dialog for the selected printer (Figure 5).
4) Check the printer is set to the same orientation (portrait or landscape) as specified in the page setup for your document. Usually the orientation does not matter, but it does for brochures and booklets.
5) From the Duplex drop down list, select Long Edge or Long Side printing. Actual options available for duplex printing do depend on printer model and the computer system being used.
6) Click OK to return to the Print dialog.
7) Select the Page layout tab in the Print dialog (Figure 3).
8) Select the Brochure option (Figure 6).
9) In the Page sides section, select All pages option from the drop-down list.
10) Click Print.

Printing in black and white or grayscale
You may wish to print documents in black and white or grayscale on a color printer. However, some color printers may only allow you to print in color regardless of the settings you choose. More details can be found in the information that came with your printer.

Printer settings
To change the printer settings to print in black and white or grayscale:
1) Go to File > Print on the menu bar or use the keyboard shortcut Ctrl+P to open the Print dialog and then select the General page (Figure 1).
2) Click Properties to open the properties dialog for the printer, then click the Device tab. The available choices available depend on printer model and computer operating system, but you should easily find options for the Color settings. An example of what you may see is shown in Figure 7.

![Figure 7: Printer Properties dialog – Device page](image)
3) In Color and select either black and white or grayscale from the drop-down list.
4) Click OK and return to the Print dialog, then click Print to print the document.

| Tip     | Grayscale is the best option if you have any colored text or graphics in the document. Colors will print in shades of gray giving more detail. When printing color in black and white some of this detail maybe lost. |

LibreOffice settings
To change the LibreOffice settings to print all color text and graphics as grayscale:

1) Go to Tools > Options > LibreOffice > Print on the main menu bar.
2) Select Convert colors to grayscale option then click OK to save the change.
3) Go to File > Print on the menu bar or use the keyboard shortcut Ctrl+P to open the Print dialog and then select the General page (Figure 1).
4) Click Print to print the document.

Draw settings
To change the Draw settings to print all color text and graphics as either black and white or grayscale:

1) Go to Tools > Options > LibreOffice Draw > Print on the main menu bar.
2) In the Quality section, select either Grayscale or Black & white option, then click OK to save the change.
3) Go to File > Print on the menu bar or use the keyboard shortcut Ctrl+P to open the Print dialog and then select the General page (Figure 1).
4) Click Print to print the document.

Exporting
LibreOffice can export documents to PDF (Portable Document Format). This industry-standard file format is ideal for sending a file for someone else to view using Adobe Reader or other PDF viewers. The process and dialogs are the same for Writer, Calc, Impress, and Draw, with a few minor differences mentioned in this section.

Directly as PDF
Click on the Export Directly as PDF icon on the Standard toolbar to export the entire document using your default PDF settings. You are asked to enter the file name and location for the PDF file, but you cannot choose page range, image compression, or other options.

Controlling PDF content and quality
For more control over the content and quality of the resulting PDF:

1) Go to File > Export as PDF on the main menu bar to open the PDF Options dialog (Figure 8). Use this dialog to select the different options in the General, Initial View, User Interface, Links, and Security pages.
2) When you have selected the appropriate settings, click Export.
3) In the dialog that opens, enter the location and file name of the PDF to be created.
4) Click Save to export the file.
See the *Getting Started* guide for more information.

![PDF Options dialog]

**Figure 8: PDF Options dialog**

**Other formats**

LibreOffice uses the term “export” for some file operations involving a change of file type. If you cannot find what you want in *File > Save As*, look in *File > Export*. LibreOffice can export files in various formats and these are listed in the drop down list for *File format*.

To export a file in another format:

1. Specify a file name for the exported document in the *File name* text box.
2. Select the required format from the *File format* drop down list.
3. Click *Export*.

See Chapter 6 *Editing Pictures* in this guide for more information on exporting graphics.

**Note**

The content of the exported file will depend on the element(s) selected on the page. No selection results in the entire image being exported. For most export formats, only the image on the current page will be exported.

**Web pages**

To export a multi-page Draw document to a series of web pages, go to *File > Export* on the main menu bar and select *HTML Document* as the file type to open the HTML Export wizard. Follow the prompts to create the web pages. If required, the wizard can generate a navigation aid to help in moving from page to page.
E-mailing documents

LibreOffice provides several ways to send documents quickly and easily as an e-mail attachment in OpenDocument format (LibreOffice default format), or as a PDF. You can email a document to several recipients, for more information, see the Getting Started guide.

Note
Documents can only be sent from the LibreOffice menu if a mail profile has been set up.

OpenDocument format
To email the current document in OpenDocument format:

1) Go to File > Send > Document as E-mail on the main menu bar. LibreOffice opens your default e-mail program with the document attached.

2) In your e-mail program, enter the recipient, subject, and any text you want to add, then send the e-mail.

PDF format
To email the current document as a PDF file:

1) Go to File > Send > E-mail as PDF on the main menu bar. LibreOffice creates a PDF using the default PDF settings and then opens your email program with the PDF file attached.

2) In your e-mail program, enter the recipient, subject, and any text you want to add, then send the e-mail.
