Introduction

You can use Calc without a pointing device, such as a mouse or touchpad, by using keyboard shortcuts. This appendix provides a comprehensive reference list of the available built-in shortcuts, which you can browse to find ones that may be useful in your daily work.

When you first install LibreOffice, a default set of Calc keyboard shortcuts is available. These are described in this chapter, assuming no customization. When using Calc, you can discover shortcuts for common interactions by observing the key sequences identified on the menu options and in the tooltips of toolbar icons. You can also explore a more comprehensive list of shortcuts by viewing the *Keyboard* tab of the Customize dialog (**Tools > Customize**).

Further information about many individual key combinations can be found throughout the chapters of this guide and in the Help system.

You can define your own shortcuts or change existing shortcuts by going to **Tools > Customize > Keyboard** on the Menu bar. See Chapter 14, Setting up and Customizing, for further instructions. Some shortcuts cannot be re-assigned; these are identified in the "Keyboard shortcuts that cannot be modified" sections on pages 12 (Windows / Linux) and 20 (macOS).

Caution

Be careful when reassigning predefined shortcuts. Although you can reset shortcut keys back to LibreOffice defaults, changing common hotkeys, such as F1 for Help, can cause confusion and frustration, especially if other users share your computer.

🗸 Note

Different operating systems may allocate particular keys to operating system functions and, in such cases, those keys may not perform the Calc functions described in this appendix.

For example, the *F1* function key may be used to put your Windows computer into a sleep / hibernation mode and so cannot be used to access the Calc Help system. For some macOS versions, the *Cmd+F5* key sequence is used by macOS to display its VoiceOver dialog and so cannot be used to control the display of Calc's Sidebar. Similarly the *Shift+F11* key sequence may be used by macOS to show its desktop and so cannot be used to access Calc's Save as Template dialog.

Check your computer system's documentation to determine which key presses are used by the operating system and hence cannot carry out Calc functions.

The remainder of this chapter is in two main sections, one listing the keyboard shortcuts available in the Windows and Linux environments, and the other listing the macOS keyboard shortcuts.

Windows / Linux keyboard shortcuts

Many of the keyboard shortcuts in this section use the *Ctrl* key. Some keyboards have two *Ctrl* keys and in that case you may need to experiment to identify which of the two keys to use.

Keyboard shortcuts for Menu bar options and toolbars

Tables 1 to 4 list Calc keyboard shortcuts that can be used instead of the options on the Menu bar, the Standard toolbar, or the Formatting toolbar. The toolbars are assumed to contain the initial default set of icons, without any user customization.

Chart keyboard shortcuts

Table 11 lists some shortcuts that are available within a Calc chart.

🧃 Tip

You can use the *Alt* key with the arrow keys and plus (+) and minus (-) keys to move elements with a finer degree of movement for more accuracy.

Windows / Linux	Effect
Tab	Selects the next chart element.
Shift+Tab	Selects the previous chart element.
Ноте	Selects the first chart element.
End	Selects the last chart element.
Esc	Cancels selection.
Arrow keys	Moves the element in the direction of the arrow.
