

The free power-packed, Open Source personal productivity suite for:

MS Windows, Mac OS X, GNU/Linux

LibreOffice gives you six feature-rich applications for all your document production and data processing needs:

Writer, Calc, Impress, Draw, Math, Base

Designed to address **your office needs** whether the office is you, doing it all or your part in a larger document production environment, with functionality included for master documents, networked printing services; even that quick web page.

LibreOffice uses **Open Document Format**, recognized by many governments worldwide, as the default format for office documents.

You, too, can get involved!

Exchange Data With Other Suites

The default document format of LibreOffice is Open Document Format (ODF), which was approved by ISO on 30/11/2006 as an international standard (ISO / IEC 26300).

ODF is recommended by numerous governments and NGO's worldwide, with Indonesia, the European Commission, and NATO amongst other's supporting policies calling for ODF as the preferred document production, retention and exchange format.

In addition, LibreOffice supports document formats of many other office suites, from the most current to numerous legacy formats for extended interoperability.

LibreOffice, Help, Support and Contact Information
