## Introduction

---

You can use LibreOffice without requiring a pointing device, such as a mouse or touchpad, by using its built-in keyboard shortcuts.

LibreOffice has a general set of keyboard shortcuts, available in all components, and a component-specific set directly related to the work of that component. This appendix lists the default set for Writer. For general shortcuts, see Appendix A of the *Getting Started* guide.

For help with LibreOffice's keyboard shortcuts, or using LibreOffice with a keyboard only, search the LibreOffice Help using the "shortcut" or "accessibility" keywords.

In addition to using the built-in keyboard shortcuts listed in this Appendix, you can define your own. See Chapter 16, Customizing Writer, for instructions.

### Note

Some of the shortcuts listed here may not work if your operating system uses the same shortcuts for other tasks.

To get around this problem, assign different keys to these shortcuts by reconfiguring either LibreOffice (see Chapter 16) or your operating system (see system documentation).

## Tip for Macintosh users

Some keystrokes are different on a Mac from those used in Windows and Linux. The following table gives some common substitutions for the instructions in this book. For a more detailed list, see the application Help.

<i>Windows or Linux</i>	<i>Mac equivalent</i>	<i>Effect</i>
<i>Right-click</i>	<i>Control+click</i> and/or <i>right-click</i> depending on computer system	Open a context menu
<i>Ctrl (Control)</i>	⌘ ( <i>Command</i> )	Used with other keys
<i>F5</i>	<i>Shift+⌘+F5</i>	Open the Navigator
<i>F11</i>	⌘+T	Open the Styles and Formatting window

## Opening menus and menu items

---

<i>Shortcut Keys</i>	<i>Result</i>
<i>Alt+&lt;?&gt;</i>	<p>Opens a menu where &lt;?&gt; is the underlined character of the menu you want to open. For example, <i>Alt+F</i> opens the menu <b>F</b>ile.</p> <p>With the menu open, you will again find underlined characters. You can access these menu items directly by simply pressing the underlined character key. Where two menu items have the same underlined character, press the character key again to move to the next item.</p> <p><i>Example:</i> to access the <b>P</b>rinter <b>S</b>ettings item of the <b>F</b>ile menu after opening it, press <i>R</i> twice to move from the initial <b>D</b>igital <b>S</b>ignatures selection to <b>P</b>rinter <b>S</b>ettings.</p> <p><i>Exception:</i> <b>L</b>anguage in the <b>T</b>ools menu has no underlined characters.</p>

Shortcut Keys	Result
<i>F6</i>	Repeatedly pressing <i>F6</i> switches the focus and circles through the following objects: <ul style="list-style-type: none"> <li>• Menu bar</li> <li>• Every toolbar from top to bottom and from left to right</li> <li>• Every free window from left to right</li> <li>• Document</li> </ul>
<i>Shift+F6</i>	Switches through objects in the opposite direction.
<i>Ctrl+F6</i>	Switches the focus to the document.
<i>F10</i> or <i>Alt</i>	Switches to the Menu bar and back.
<i>Esc</i>	Closes an open menu.

## Accessing a menu command

Press *Alt* or *F6* or *F10* to select the first item on the menu bar (the **File** menu). With the *right-arrow*, the next menu to the right is selected; with the *left-arrow*, the previous menu. The *Home* and *End* keys select the first and the last item on the Menu bar.

The *down-arrow* opens a selected menu. An additional *down-arrow* and *up-arrow* moves the selection through the menu commands. The *right-arrow* opens any existing submenus.

Press *Enter* to execute the selected menu command.

## Executing a toolbar command

Press *F6* repeatedly until the first icon on the toolbar is selected. Use the right and left arrows to select an icon on a horizontal toolbar. Similarly, use the up and down arrows to select an icon on a vertical toolbar. The *Home* key selects the first icon on a toolbar and the *End* key, the last.

Press *Enter* to execute the selected icon. If the selected icon normally demands a consecutive mouse action, such as inserting a rectangle, then pressing the *Enter* key is not sufficient: in these cases press *Ctrl+Enter*.

- Press *Ctrl+Enter* on an icon for creating a draw object. A draw object will be placed into the middle of the view, with a predefined size.
- Press *Ctrl+Enter* on the Selection tool to select the first draw object in the document. If you want to edit, size, or move the selected draw object, first use *Ctrl+F6* to move the focus into the document.

If a toolbar is longer than can be displayed on screen, it shows an icon at the right or lower edge. Select the toolbar and press *PageUp* or *PageDown* to display the remaining icons.

## Navigating and selecting with the keyboard

You can navigate through a document and make selections with the keyboard.

- To move the cursor, press the key or key combination given in the following table.
- To select the characters under the moving cursor, additionally hold down the *Shift* key when you move the cursor.

<b>Key</b>	<b>Function</b>	<b>Plus Ctrl key</b>
<i>Right, left arrow keys</i>	Moves the cursor one character to the left or to the right.	Moves the cursor one word to the left or to the right.
<i>Up, down arrow keys</i>	Moves the cursor up or down one line.	( <i>Ctrl+Alt</i> ) Moves the current paragraph up or down.
<i>Home</i>	Moves the cursor to the beginning of the current line.	Moves the cursor to the beginning of the document.

<i>PgUp</i>	Scrolls up one page.	Moves the cursor to the header.
<i>PgDn</i>	Scroll down one page.	Moves the cursor to the footer.

## Controlling dialogs

When you open any dialog, one element (such as a button, an option field, an entry in a list box, or a checkbox) is highlighted or indicated by a dotted box around the field or button name. This element is said to have the focus on it.

<b>Shortcut Keys</b>	<b>Result</b>
<i>Enter</i>	Activates the selected button. In most cases where no button is selected, <i>Enter</i> is equivalent to clicking <b>OK</b> .
<i>Esc</i>	Closes the dialog without saving any changes made while it was open. In most cases, <i>Esc</i> is equivalent to clicking <i>Cancel</i> . When an open drop-down list is selected, <i>Esc</i> closes the list.
<i>Spacebar</i>	Toggles a checkbox on or off.
<i>Up, down arrow keys</i>	Moves the focus up and down a list. Increases or decreases the value of a variable. Moves the focus vertically within a section of a dialog.
<i>Right, left arrow keys</i>	Moves the focus horizontally within a section of a dialog.
<i>Tab</i>	Advances the focus to the next section or element of a dialog.
<i>Shift+Tab</i>	Returns the focus to the previous section or element in a dialog.
<i>Alt+Down-arrow</i>	Shows items in a drop-down list.
